

SREENIVASA RAJU KONDURU

Software Engineer

Gainesville, FL | (352) 721-4569 | kondurusreenivasaraju1@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Software Engineer with 3+ years building backend **Java** and **Spring Boot** microservices, **REST APIs**, asynchronous integrations, and database-driven applications. Reduced API response latency by **35%** for business-critical USAA claims services and currently builds **Python automation** and internal tools for University of Florida transportation operations. Architected the **Distributed Intelligence Runtime**, a distributed job-processing platform built with **FastAPI**, **Kafka**, **PostgreSQL**, **Redis**, **Kubernetes**, and end-to-end observability.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, C++

Backend: Spring Boot, Spring MVC, Spring Security, FastAPI, REST APIs, Microservices, SQLAlchemy

Data & Messaging: PostgreSQL, Oracle SQL, Redis, MongoDB, Apache Kafka, IBM MQ, pgvector

Cloud & Infrastructure: AWS, Azure, Docker, Docker Compose, Kubernetes, NGINX

Security: OAuth 2.0, JWT, RBAC, CyberArk

Observability & Ops: Splunk, Prometheus, Grafana, OpenTelemetry, Jaeger, Structured Logging

Testing & Delivery: JUnit, Mockito, Selenium WebDriver, OpenPyXL, Jenkins, Maven, Git, Bitbucket, Alembic, Load Testing

PROFESSIONAL EXPERIENCE

University of Florida — Transportation & Parking Services

September 2024 – Present

Web Application Developer

Gainesville, FL

- Developed reusable **Python** automation workflows using **Selenium WebDriver** and **OpenPyXL** for payment-plan processing, permit administration, validator provisioning, and account maintenance, replacing repetitive record-by-record work across transportation operations.
- Implemented validation and exception-handling logic for closed payment plans, missing accounts, duplicate records, invalid data, and application errors, improving workflow reliability and reducing manual corrections.
- Built **PostgreSQL** queries and reconciliation workflows to investigate account, permit, vehicle, payment, garage-occupancy, and validation-record discrepancies, supporting **root-cause analysis**, operational reporting, and data-integrity improvements.
- Developed and maintained internal web and data tools using **JavaScript**, **HTML**, **CSS**, and relational databases, contributing to requirements analysis, testing, troubleshooting, deployment validation, documentation, and production support.

Tata Consultancy Services — Client: USAA

April 2021 – August 2023

Systems Engineer — Java Backend Developer

India

- Developed **Java 8** and **Spring Boot** microservices supporting auto and property claims workflows across claims, policy, customer, payment, and notification domains.
- Designed and integrated **REST APIs** and **IBM MQ** messaging workflows for asynchronous communication between distributed claims applications.
- Reduced API response latency by **35% (850ms → 550ms)** by optimizing **Oracle SQL** queries, indexes, and database connection-pool configuration.
- Migrated application credentials from locally managed configuration to **CyberArk** centralized vault retrieval, strengthening secret management, credential security, and compliance controls.
- Diagnosed and resolved production incidents using **Splunk**, application logs, SQL analysis, debugging, and **root-cause analysis** across business-critical claims applications.
- Developed **JUnit** and **Mockito** tests covering service logic, REST API behavior, and regressions, and supported builds and releases through **Git**, **Bitbucket**, **Jenkins**, and **Maven** CI/CD.

PROJECTS

Distributed Job Processing Platform | *Python · FastAPI · Apache Kafka · PostgreSQL · Redis · pgvector · Docker · Kubernetes · NGINX · JWT · RBAC · OpenTelemetry · Jaeger · Prometheus · Grafana*

- Architected an **event-driven** platform for submitting, scheduling, tracking, and executing asynchronous, long-running workloads through independently scalable **FastAPI** API and worker services.
- Implemented reliable **PostgreSQL-to-Kafka** event publishing using the **transactional outbox pattern**, **Kafka consumer groups**, **idempotent processing**, retry scheduling, **dead-letter queues**, and controlled event replay.
- Designed **PostgreSQL** job-lifecycle management across pending, queued, running, retrying, completed, failed, dead-lettered, and cancelled states; used **Redis** for caching, coordination, and distributed **rate limiting**, and secured APIs with **JWT** authentication, **RBAC**, audit trails, and **circuit breakers**.
- Deployed multiple **FastAPI** instances behind **NGINX** and **Kubernetes** service discovery with health checks, readiness probes, and horizontal scaling, and instrumented services with **OpenTelemetry**, **Jaeger**, **Prometheus**, and **Grafana** for tracing, latency, throughput, and service-health monitoring — validated through load and failure-simulation testing.

Distributed Reddit Backend Engine | *C++ · PostgreSQL · Multithreading*

- Built a multithreaded **C++** and **PostgreSQL** backend supporting post creation, voting, threaded comments, community membership, and feed generation.
- Implemented thread-safe data structures, synchronization controls, connection management, and rate limiting; tested up to **1,000 concurrent connections** and observed **sub-50 ms** response times for benchmarked operations in a local test environment.

EDUCATION & CERTIFICATIONS

University of Florida — M.S. Computer Science

August 2023 – May 2025

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | **Salesforce Platform Developer**
