PROFESSIONAL SUMMARY

Software Engineer with 4+ years of professional experience across backend development, automation, and technical operations. Built **Java/Spring Boot services**, Python automation, SQL-backed applications, and event-driven systems. At TCS/USAA, reduced policy/member API latency **35% (850 ms to 550 ms)** through Oracle SQL optimization. At UF, translated supervisor requirements into a production scheduler and reduced a **6-7 hour workflow to about 1 hour**. Built a FastAPI/Kafka/PostgreSQL RAG platform and evaluated Wave2Vec/HuBERT speech representations.

TECHNICAL SKILLS

- **Languages & Full Stack:** Java 8/11/17/21, Python, SQL/PLSQL, C++, JavaScript/TypeScript, HTML/CSS, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, JDBC, FastAPI.
- **Backend Architecture & System Design:** Microservices, REST APIs, event-driven architecture, distributed job processing, transactional outbox, Kafka consumer groups, idempotency, retries/DLQ, rate limiting, load balancing.
- **Applied AI/ML & Data:** RAG, LLM integration, embeddings/vector search, pgvector, Wave2Vec, HuBERT, model fine-tuning/benchmarking, Oracle, PostgreSQL, Redis.
- **Cloud, DevOps, Testing & Observability:** AWS Lambda/S3/API Gateway, Docker/Compose, Kubernetes, NGINX, Linux, JUnit, Mockito, Selenium, Jenkins, Maven, Git, CI/CD, Splunk, OpenTelemetry, Jaeger, Prometheus/Grafana.

PROFESSIONAL EXPERIENCE

Web Application Developer | University of Florida

Gainesville, FL | June 2025 - Present

- Translated supervisor staffing requirements into **TAPS Smart Scheduler**, a browser-based JavaScript application replacing spreadsheets; implemented availability, combined weekly-hour, holiday, break, conflict, and coverage-gap rules.
- Created reusable Python/Selenium/OpenPyXL automation for permit, validator, and account workflows, with checks for missing accounts, duplicates, and invalid input.
- Developed internal web/data tools with JavaScript, HTML/CSS, Python, and PostgreSQL through testing and production maintenance; wrote reconciliation queries to isolate account, permit, vehicle, payment, occupancy, and validation discrepancies.

Student Assistant | University of Florida

Gainesville, FL | September 2024 - May 2025

- Automated payment-plan updates across **hundreds of records** using Python, Selenium WebDriver, and OpenPyXL, reducing a recurring **6-7 hour workflow to approximately 1 hour** while checking closed plans, missing accounts, duplicates, and invalid input.
- Supported parking payments, permits, and customer accounts; maintained transaction records and escalated policy or system exceptions for follow-up.

System Engineer | Tata Consultancy Services | Client: USAA

Chennai, India | April 2021 - August 2023

- Developed and supported Java 8/Spring Boot microservices and REST APIs for auto/property claims using Spring MVC, Spring Security, Spring Data JPA/JDBC, and Oracle.
- Implemented IBM MQ/JMS producers and listeners for asynchronous claims events, including retry/error handling and poison-message routing.
- Reduced production policy/member lookup API latency from **approximately 850 ms to 550 ms (35%)** by simplifying Oracle SQL joins and filters, selecting required columns, and using existing indexes; validated equivalent results.
- Migrated service-account credentials to CyberArk-managed retrieval; during readiness checks, identified a missing Production-region provisioning request, verified permissions and JDBC connectivity, and validated fixes with JUnit/Mockito through Maven/Jenkins CI/CD.

TECHNICAL PROJECTS

DIR: Distributed Job Processing Platform | Python, FastAPI, Kafka, PostgreSQL/pgvector, Redis, Docker, NGINX

- Built an asynchronous RAG backend where FastAPI returns job IDs; Kafka workers retrieve pgvector context, invoke an LLM, and persist job state, answers, and sources in PostgreSQL.
- Created jobs and outbox events atomically in PostgreSQL; coordinated Kafka workers with consumer groups, row locks, idempotency, retry scheduling, and dead-letter routing. Secured APIs with JWT/RBAC and Redis rate limiting; ran two FastAPI replicas behind NGINX and instrumented with OpenTelemetry, Jaeger, Prometheus, and Grafana.

CIS: Acoustic Eavesdropping via Electromagnetic Signals | Wave2Vec, HuBERT, CNN, Signal Processing

- Built a speech-classification pipeline on AudioMNIST, Free Spoken Digit, and EMI Speech; applied filtering, noise reduction, and downsampling, then compared fine-tuned Wave2Vec/HuBERT representations with logistic-regression, CNN, and spiking-neural-network baselines in batched GPU experiments.

EDUCATION & CERTIFICATIONS

M.S. Computer Science | **University of Florida** | GPA: 3.59/4.00 | May 2025

B.Tech Computer Science Engineering | **Sathyabama Institute of Science and Technology** | May 2020

Certifications: AWS Certified Solutions Architect - Associate | Salesforce Platform Developer I
